## FOREWORD

### **DR. SURESH BHOSALE**

Chairman & Managing Trustee,  
Krishna Charitable Trust, Karad

We stand on cosmic shores still trying to gauge the concept of infinity. We grow, mature, age and before reaching our final resting place give birth to new life. This cycle of life and death has continued on our planet for millions of years. However today equipped with new knowledge, confident and arrogant as we may be, there is need to realize that we are yet to come to terms with the challenges in health care & the secrets of life and death continue to confound us. This precisely makes health sciences all the more interesting, intriguing and a challenging profession.

**Health Sciences Education** is in a period of transition where in older established methods of class-room teaching, tutorials and practical are being replaced by new methods of e-learning, interactive classrooms and simulation laboratories. Self-learning has got a new fillip with online (digital) libraries and the use of social media. These present generation methods like viewing lectures before coming to the class-room has become a forum for discussion and question-answers. Case-based

learning, problem based learning, critical thinking and simulations which deal with real-life situations definitely benefit the learner with a better understanding of the subject and help us as educators in achieving our goal of producing competent, knowledgeable and skilled graduates.

Today as we tread this path with so many technology options there is a need to standardize, formulate and regulate programs. The desire to achieve specific learning outcomes which is the most important part of curriculum planning needs some form of uniformity in the methods of instruction & delivery of knowledge preferable vetted by the apex councils. The teaching-learning program so devised will need a long term feedback and assessment to remove deficiencies and for a measure of its effectiveness.

**Continuing Medical Education** plays an important part in providing standard health care based on present – day knowledge & methods. Once a health science graduate equipped with current knowledge sets out to practice, he must realize that practices are undergoing change continuously with the applications of new knowledge & technology. Therefore there is a need to keep abreast with the expanding knowledge and emerging medical technologies.

The methods of conducting or ensuring CME in health science graduates has definitely become easier with virtual classrooms & teleconferencing. Krishna Institute has been a part of telemedicine program with Medical Fraternity Continuing Medical Education (MFCME) mediated through the Dept. of Science & Technology, Govt. of India. This program provides rural health care professionals with enhanced knowledge through satellite based tele link. However monitoring CME is not effective because attending has become a mere ritual with no real applications in practice.

A 5 years re-assessment may be the answer particularly for graduates who are in private practice & are not associated with teaching. Unreasonable as it may sound it is not difficult to carry out if we have online assessment. Knowledge and competence after all are not one time achievements. They call for continuing update, improvement & life-long learning.

**Health Care as an Industry** against health care as a social & welfare responsibility of the state are glaringly opposite propositions that exist today.

Quality health care has to develop on sound infrastructure that meets international standards on all parameters of diagnostics, service and outcomes. These facilities are now available in urban areas and they offer services comparable to the best in Europe & United States. However though their cost is just 10 – 20% of similar services in the west they are expensive by Indian Standards and still out of reach of the common man in our country.

The potential to attract investment in health care is enormous as the competence of our doctors is recognized all over the world. The industry therefore has a great opportunity to expand and generate revenue and employment.

In contrast our national health service suffers from inadequate funding, lack of will, poor infrastructure and deficiency of competent personnel. The health care program in India needs new direction, new resolve, increased funding (approx. 1.5% of GDP spent on health) and most importantly accountability. The way ahead lies in developing robust public – private partnerships with insurance providers onboard. (< 5% of health care is insurance-linked in India). One of the success stories of such a partnership is the 'Rajiv Gandhi Jeevandayi Arogya Yojana' of the Government of Maharashtra. The 'RGJAY' is insurance linked

& in the year 2015 – 2016 has provided access of quality health services to more than 3.6 million individuals, with the largest no. of beneficiaries being those affected with cancer.

**The importance of Public Health** in our country need not be emphasized. It is estimated that addressing public health concerns has the potential to reduce disease burden by more than 50%. Safe drinking water, village sanitation, access to toilets, proper sewage treatment, personal hygiene and civic sense put together will take us on the path of "Swaccha Bharat" which is one of the flagship program of the Govt. of India. I have always felt that the responsibility of public health should be entrusted to individuals trained in public health. The duties of the public health professional are wide ranging, community oriented and include developing infrastructure, imparting health education, creating awareness, promoting healthy living lifestyles in the community and providing leadership in tackling public health emergencies. India does not have public health schools. Harvard University was the first to start this programme in the year 1913. The time has come for people in the corridors of power to give serious thought to this proposition.

**The Krishna Institute of Medical Sciences Deemed University** has been a leading light in providing health care and access to quality treatment for people living in villages besides performing the role of an important health care education centre in rural India. For Krishna Institute of Medical Sciences Deemed University this has been a landmark year. Accreditations in form of NABL (Diagnostic Lab), NABH (Blood Bank), NICU & ISO 9001:2008 were achieved. The hospital is undergoing constant up gradation with addition of new critical care facilities, cancer treatment (Linear accelerator) & the successful renal transplant program. The efforts of the authorities & the staff have been exemplary.

## MESSAGE

**DR. VEDPRAKASH MISHRA**

Hon'ble Chancellor

It is heartening to note that the Annual Report of the Krishna Institute of Medical Sciences (Deemed University), Karad is being brought out, which covers the plethora of happenings during the academic year 2014-15.

The report so brought out would be a handy referral piece of reading incorporating all the relevant informational details, which are of consequence and relevance.

The Annual Report also operationally turns out to be a mirror reflection of the happenings and doings by the various constituent colleges under the ambit of the University. It brings out their creative and committed activities in various domains, which pertain to teaching and learning, research, extension and also sustainable development of the society, as a whole.

An institution of higher learning cannot afford to have an '**ivory tower**' image for themselves because that would amount to they being chopped off from the societal obligations and ground realities thereto.

Krishna Institute of Medical Sciences (Deemed University), Karad with its constituent colleges is committed to catering to the cause of society in an exemplary manner, so as to render the best that is expected and desired out of it. The Annual Report categorically brings out this aspect of commitment of the University.

I record my appreciation for the Editorial Board for their untiring efforts in bringing out the same in an exemplary manner.
